STOPPING BACTERIA IN ITS TRACKS

Sterile • Film Forming • Cyanoacrylate-Based Sealant

FLORASEAL® Microbial Sealant is intended for use after topical operative skin preparations, with standard surgical draping, and prior to surgical incision. The product is used to reduce the risk of skin flora contamination throughout a surgical procedure and has demonstrated an immobilization capability with both gram-positive and gram-negative pathogenic bacteria.

Long-Lasting Microbial Protection

Eliminates bacteria migration during and long after the surgical procedure¹.

Immobilization Capability with Both Gram-Positive and Gram-Negative Bacteria

FLORASEAL® microbial sealant demonstrated 99.99% effectiveness in preventing MRSA bacteria from migrating to the incision^{1,2}

Greater Permeability

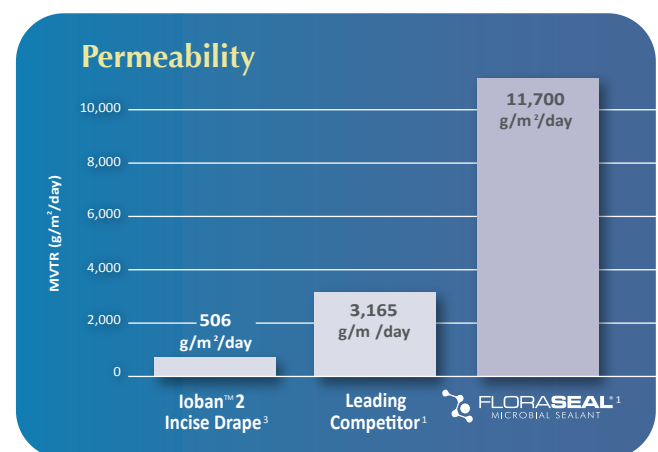

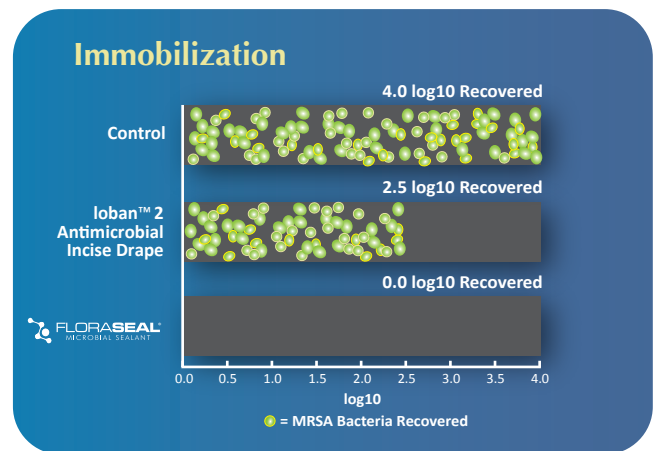

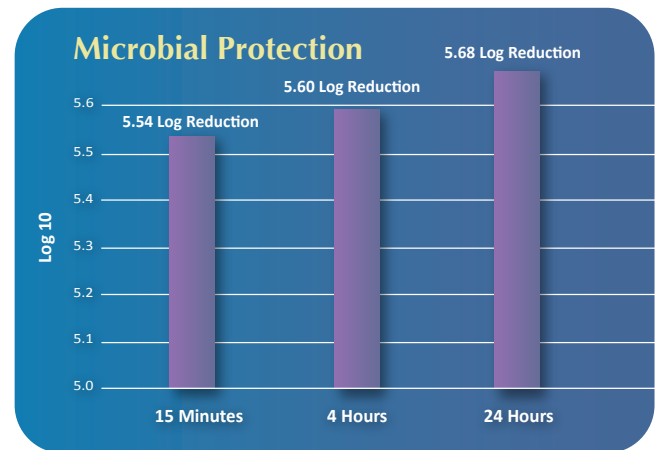

The proprietary formulation is designed to provide optimal Moisture Vapor Transmission Rate (MVTR), increasing moisture and oxygen transmission to the skin, without blockage, minimizing moisture build up. The high MVTR of FLORASEAL® microbial sealant may reduce the potential for infection by minimizing moisture build-up on skin.^{1,3}

Consistent Fluid Barrier

No need to worry about strike-through with the durable fluid and blood barrier created by the surface. The easy-to-use applicator results in uniform film coverage.

Works Anywhere

Utilizing OctylFlex® Technology, FLORASEAL® microbial sealant is applied as a liquid, resulting in a flexible, perfectly contoured surface anywhere on the skin.

| Description | Product Code | Fill Volume | Packaging |
|------------------------------|--------------|-------------|------------------------|
| FLORASEAL® Microbial Sealant | FS-250D | 2.5ml | 12 applicators per box |
